With **DropSwipe™**, collectors can easily **swipe the floor**,
and **ReSwipe™** through collectibles they like to find the ones they like the most. Users can also **Swipe Up To Buy™** at any time with our patent-pending method for discovery and transaction.

Swiping right adds an NFT to a collection bucket, and swiping left hides it.

Collectors can **ReSwipe™** through a collection bucket as often as needed until getting to a top 4. From the top 4, collectors can choose their favourite with a tap or keep all to make a choice later.

DropSwipe features NFT collections aggregated from top NFT marketplaces on Solana and EVM, such as Magic Eden & OpenSea.

Robin Schmidt from The Defiant News calls it "Tinder For NFTs"

All the tools

In addition to **DropSwipe**, collectors have access to all the standard tools from NFT marketplaces, such as make offer, rarity filtering, rarity score, trait information, floor price, total holders, daily volume, and grid mode accessible from the global swiper page.

DropMagnet works on any browser, using deep links to interact with wallets such as **Phantom** and **MetaMask**.

DropMagnet's unique discovery and curation tools augment the natural ability of humans to make fast decisions, helping them to choose favorites without the hassle of lists.

Once collectors have built their NFT collection, they can also harness the power of **DropMagnet** to share their collection and further give them utility.
