

NFTs + Social Unleashed

With **MetaURLs™**, collectors can easily share their NFT collections with self-referential domain names such as [bob.me.link](#).

MetaURLs™ are structured to have **[YourName.] [YourJobOrPassion] [.link]**

MetaURLs™ also allow you to gate access to social posts with NFTs you've created or any NFTs you like.

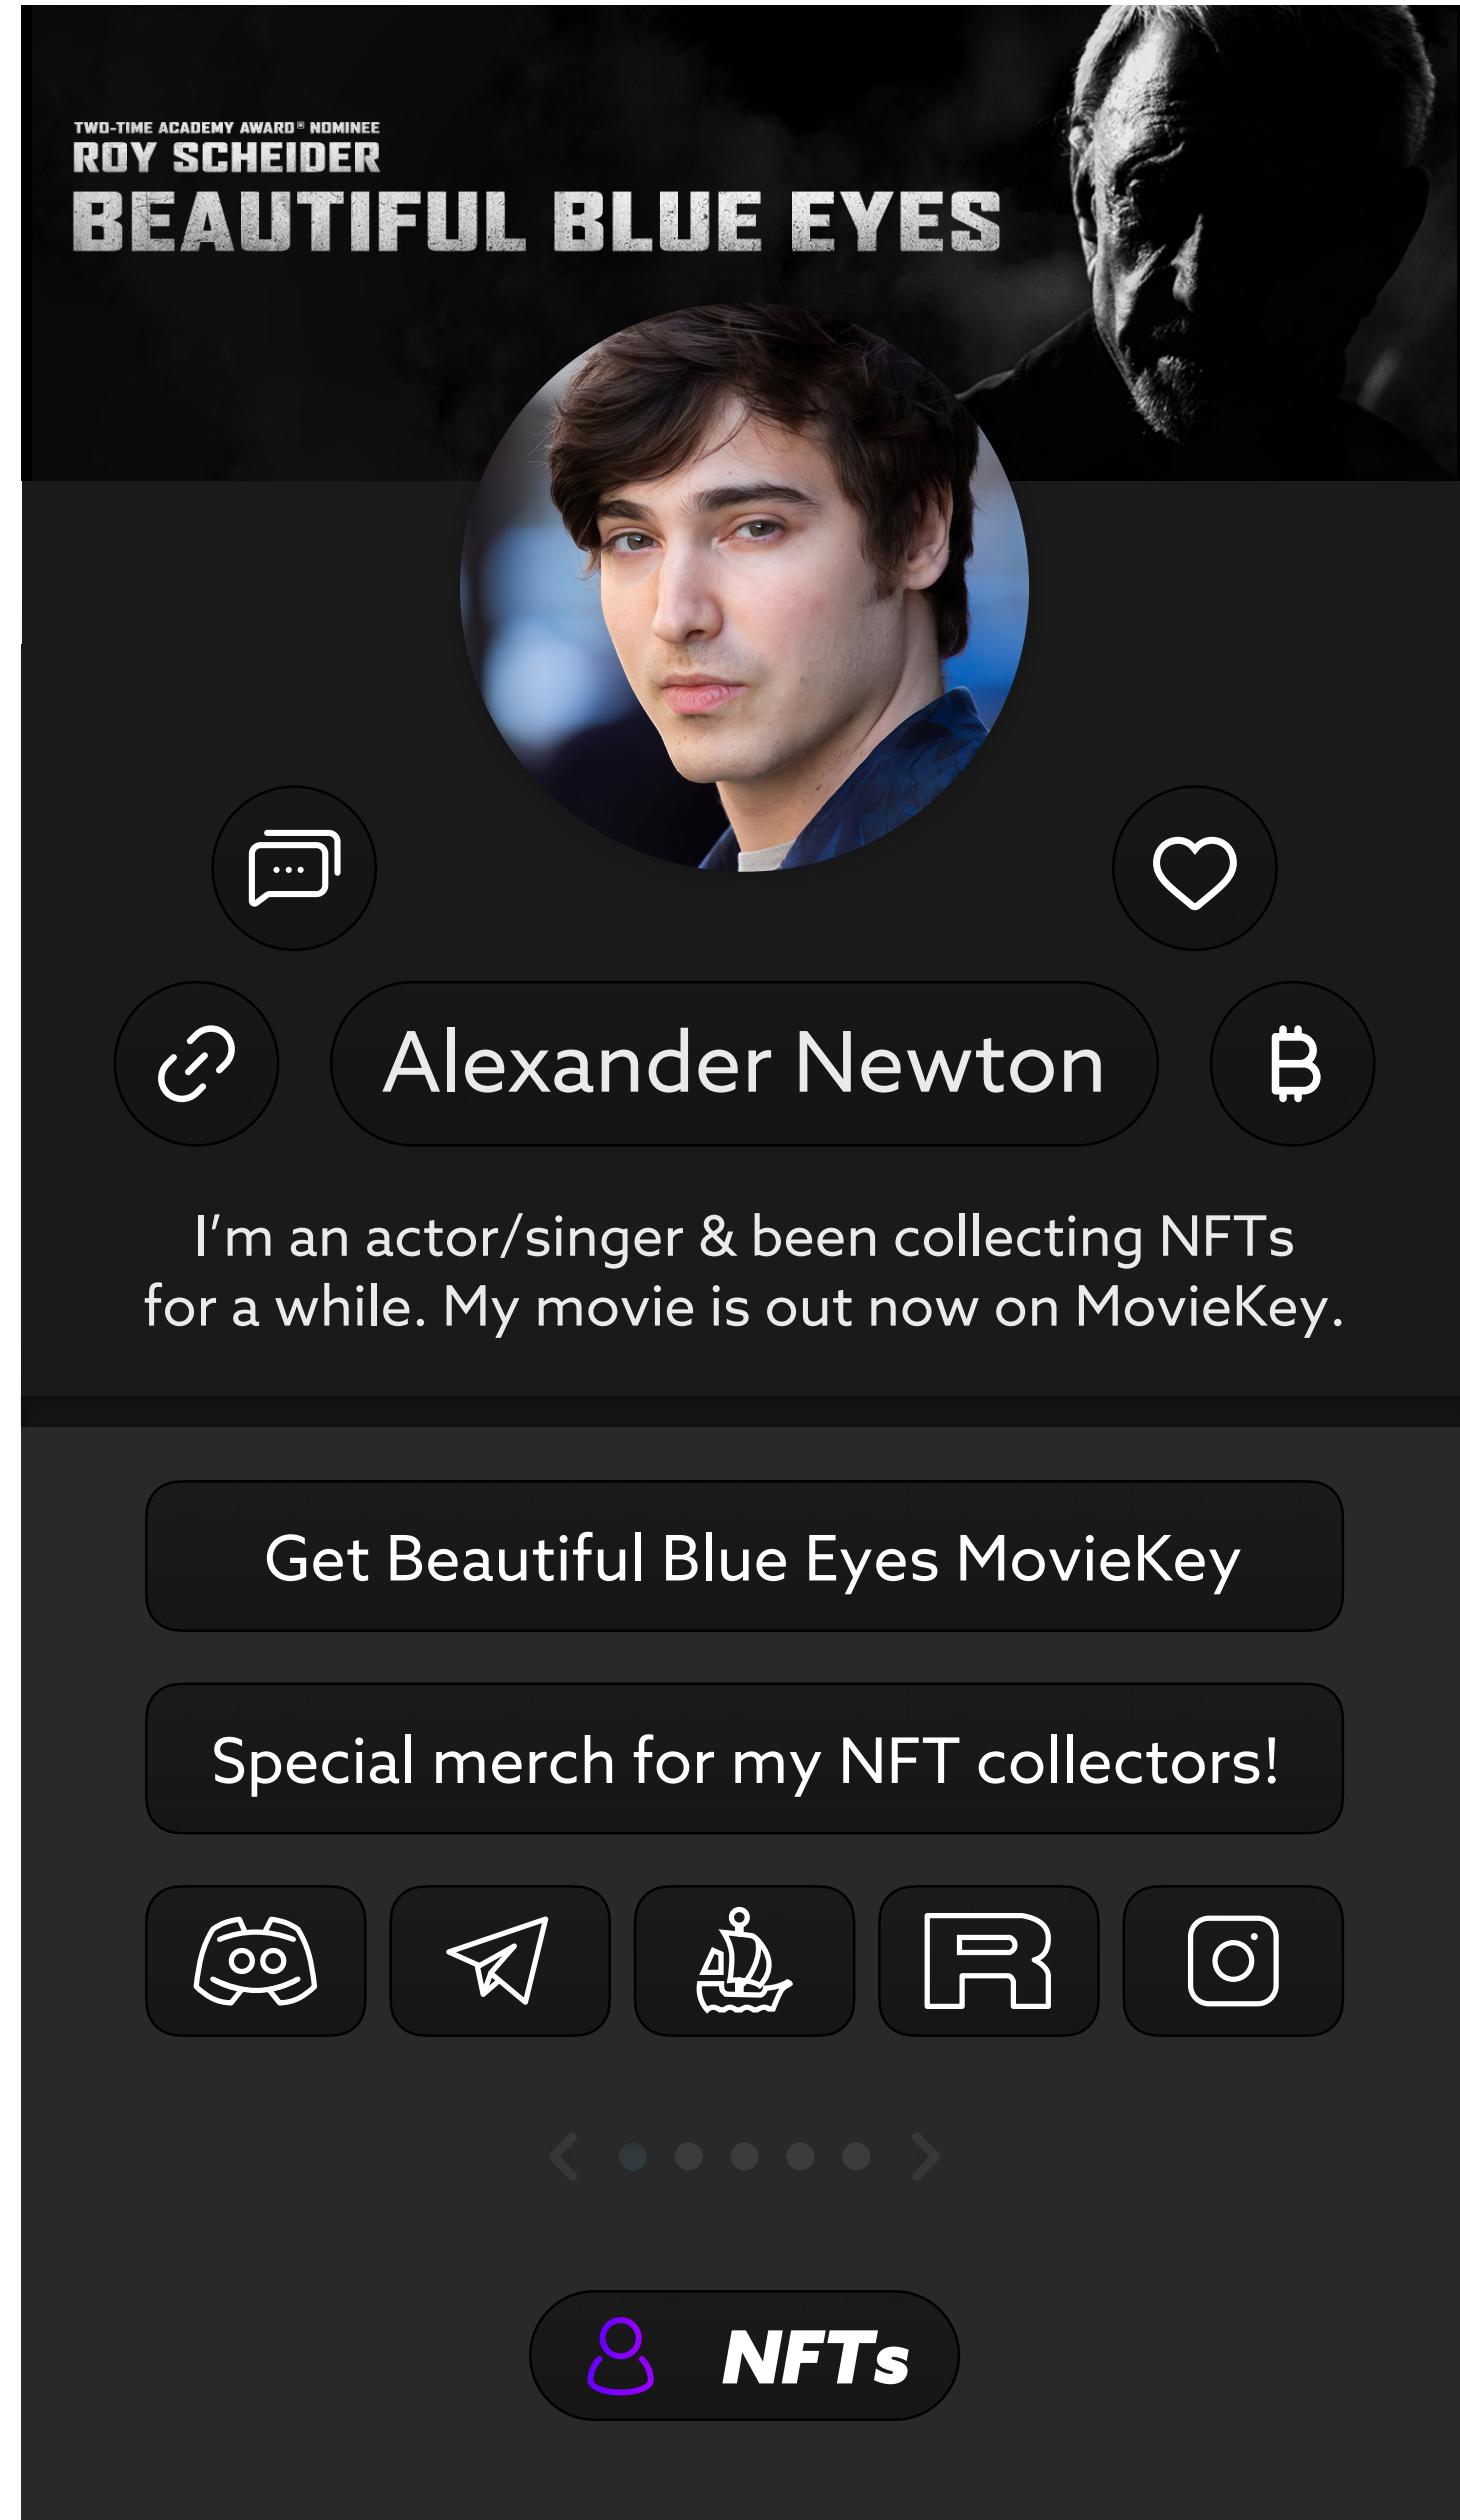

For example, Alexander Newton might only want collectors of his NFT collection to see his social posts on his **MetaURL™ [AlexanderNewton.actor.link](#)**.

Joshua Newton might only want people who buy his movie on **MovieKey™** to see his social posts on [JoshuaNewton.director.link](#).

There are hundreds of MetaURLs™ to choose from, including but not limited to:

[me.link](#), [painter.link](#), [singer.link](#), [dancer.link](#), [speaker.link](#), [WAGMI.link](#)
[collector.link](#), [footballer.link](#), [basketballer.link](#), [actor.link](#), [actress.link](#),
[producer.link](#), [boxer.link](#), [rapper.link](#), [guitarist.link](#), [comedian.link](#), [politician.link](#)

Pick the one that refers to you best and enjoy the benefits including special integration with **MovieKey™**, the movie format built with NFTs to unleash digital movie ownership.
